Preface

We wish all members of the Scandinavian Sarcoma Group and external guests welcome to our 39th plenary meeting in Bergen, Norway, May 8-10, 2019. This meeting also coincides with the 40 years jubilee for our group. We are excited to announce the participation of several excellent invited speakers, from both European countries and other continents.

The meeting will begin Wednesday morning with a workshop on Li Fraumeni Syndrome arranged by the Norwegian Working Group for Hereditary Cancer where SSG-meeting participants get the possibility and are encouraged to participate. Basic research, diagnostics and treatment of bone- and soft tissue sarcoma will be extensively covered throughout the meeting, and also how to handle lung metastases with surgery or radiotherapy. A session on abdominal sarcomas including the gynecological entities along with the assets of transatlantic collaboration will form a central part of the agenda. Additionally, novel design of clinical trials will be presented and hopefully motivate SSG to participate in more studies! The nurses- and physiotherapy program will focus on handling wounds, alternative treatment and rehabilitation.

Many of the sessions will be joint sessions between physicians, scientists, nurses and physiotherapists. A collaboration between these groups is important for the development of new treatment strategies for sarcoma patients. The Scandinavian Sarcoma Group subcommittee for Nurses & Physiotherapists was established 12 years ago and has demonstrated their importance in many fields.

Lastly, there will be free presentations, a poster session and a panel discussion of the SSG's 40 year's journey through sarcoma diagnostics and treatment. We hope that all SSG members and other participants will find the conference inspiring and take the opportunity to meet and discuss collaborative work.

We wish you an enjoyable and memorable stay in Bergen!
