

Central register committee WTC 4 December, 2018, Malmö

Update of contact persons from each center. Emelie Styring (Sweden), Olga Zaikova (Norway), Peter Holmberg (Denmark) and Halldór Jónsson Jr (Iceland) will remain national coordinators.

Update on register construction in Norway, soon the national register will be up and running. Comparison to the Norwegian cancer registry for completeness will be done. Hopefully it will aid in complete data from all parts of Norway.

Abdominal sarcomas, problematic with registers in most countries. Oslo registers all their cases, none in the rest of Norway, Denmark registers all retroperitoneal but some GISTs are missed. In Sweden most regions have begun reporting but without any completeness controls.

Gynecological sarcomas are recorded differently in each country. Overview of number of cases and such can be found.

Joint annual report – more planning of parameters before extraction of data for the next annual report. Inclusion of more outcome parameters. Continuous discussion between the national coordinators.

Discussion on how to improve outdata solutions, new options possible in Sweden at least. David Wennergren from Gothenburg came with great suggestions and inspiration!

Emelie Styring

Chairman of central register committee
