

Pathology meeting in Turku 10-11 October 2019

As always, an interesting meeting, this time well organized by Markku Kallajoki.

Participants: Markku Kallajoki, Pehr Rissler, Jan Köster, Bodil Bjerkehagen, Anand Loya, Johan Wejde, Felix Haglund, Florian Puls and Eva-Mari Olofsson.

Discussion: About the difficulties to transport tissue samples for molecular testing over borders. For the near future this work will have to pause.

We see the same problem when moving gen data and scanned pictures between countries. We will try to remove the identity of the patient, but still make it possible to review and search for rare diagnoses and have digital meetings. All cases that we review should be scanned and made available for SSG members.

We have looked at difficult and rare cases with uncertain diagnose, specified/country below:

DENMARK

Folikulär dendritisk tumor
Myxoid DFSP
Myxoitt liposarkom in retroperitoneum
Desmoplastiskt fibroblastom
Spolcelligt rhabdomyosarkom
Lymfangioleomyomatos/Pekom
Myoepithelioma
Chondrosarkom med klarcellig komponent

NORWAY

Chondroblastisk osteosarkom
Consultation case
Extrasceletal mesenchymal chondrosarcoma
Myoepithelial carcinoma/Ossifying fibromyxoid tumor
Myxofibrosarkom
Dedifferentierat liposarkom

SWEDEN

Metastas av endometriestromasarkom
Unclassified lipomatous tumour
Myofibroblastic tumor of the breast, nodular fasciitis
Stromacellssarkom/Pekom
Fibroblastisk retikelcellstumör

Myoepithelioma
Mesenchymal chondrosarcoma

FINLAND

Låggradigt fibromyxoitt sarkom
Three consultant cases from Turku with unclear diagnose.

Topics and venue for the next meeting

We agreed to have the next meeting in Copenhagen in May -20.

- ✚ Primarily to discuss what is new in the WHO-book (not yet published)
- ✚ Mesenchymal chondrosarcoma
- ✚ Sarcomas in heart
- ✚ Identify cases
- ✚ Non-GIST in GI tractus
- ✚ Sclerosing epithelioid fibrosarcoma/Low grade fibrosarcoma-like tumors (MUC4- negative).

Lund 2019-12-13
