# Preface

---

We all have been waiting eagerly for a time in which a sense of normality is restored, and we could meet each other again face to face. We are grateful that this time has finally come, and we wish all members of the Scandinavian Sarcoma Group (SSG) and external guests welcome to our 40<sup>th</sup> Congress in Tampere, Finland, 26<sup>th</sup>-28<sup>th</sup> of April 2022. We are excited to announce the participation of several excellent invited speakers from various European countries.

The meeting will begin with a workshop on desmoid tumors arranged by SSG together with EURACAN. The participants will get the opportunity to hear about the various diagnostic and therapeutic challenges of this disease and discuss some difficult cases.

Basic research, diagnostics, and treatment of bone- and soft tissue sarcoma will be extensively covered throughout the meeting.

A session will be dedicated to immunotherapy, with a focus on why it has not been as effective in sarcomas as in other cancers and how to learn from that when designing new immunotherapy trials in sarcomas.

There will also be a dedicated session on the management of benign soft tissue and bone tumors.

As a new feature, we will dedicate a session to give young Nordic PhD students from all disciplines to present their PhD projects. The idea is not (only) to present completed and finished projects but also projects in the process of being written to create discussions, generate ideas and help the young researchers liaise with other researchers and may be expand their projects and create future collaborations.

Another new feature is inviting representatives from patient advocacy groups in Scandinavia to register and attend the events of the congress and meet members and board members.

Additionally, we will pay attention to pediatric sarcomas with a dedicated lecture about fusion sarcomas in the pediatric group and two radiotherapy lectures describing both external beam and brachytherapy in the pediatric group.

The nurses- and physiotherapists program will focus on next generation communication and holistic approach in managing sarcoma patients.

Many of the sessions will be joint sessions between physicians, scientists, nurses, and physiotherapists. A collaboration between these groups is important for the development of new treatment strategies for sarcoma patients.

All of this could not have been possible without the support from the various sponsors and the efforts of organizing committee. We wish to thank them all and hope that you will find the conference inspiring and take the opportunity to meet, network and discuss future collaborative work.

We wish you an enjoyable and memorable stay in Tampere!

Akmal Safwat  
Chairman for the Scandinavian Sarcoma Group
