

**Report Central Registry Group,
Scandinavian Sarcoma Group Working Group meeting, December 4-5,
2024.**

Michael Bendtsen presented status for national sarcoma register in Denmark.
Emelie Styring presented status for national sarcoma register in Sweden.
Halldór Jónsson jr presented status for national sarcoma register on Iceland.
Olga Zaikova presented status for national sarcoma register in Norway.

We discussed a proposal to define some single reports on epidemiology and some quality parameters to report across the respective sarcoma registers, but find it not appropriate, at least in coming year.

Links to all sarcoma annual reports and registers will be shared on the SSG web site and can be referred to in the annual reports.

Further, we discussed status with SSG Central Register Group. The SSG Central Register in Lund have been discontinued for several years ago due to personal data protection regulation. At the same time, all Scandinavian countries have built up national sarcoma registries. Therefore, the need of joint Scandinavian register has waived, and future efforts should aim collaboration between national registers.

The SSG Central Register, SSG Central Register Group and position of Central Register chair will be closed down. Creation of a new national registers collaborating group is desirable. That requires changes in SSG bylaws.

The SSG Central Register Group will put forward a proposal of changes in bylaws before next working group committee meeting.
